

AIAA 3111 Course Project Notice

Dear all,

Please form your project teams on Canvas and plan your work around the schedule below.

1. Project Overview

Work in teams to complete a data mining project on a real-world problem, write a report, create a poster, and present your work at the **Poster Session**. The project accounts for **20% of your overall course grade**. You may propose your own topic or adapt a reference example, addressing **classification, clustering, anomaly detection, or pattern mining**. See the **Course Project Guide** for details.

2. Team Formation

Form a team of **2–4 members** on Canvas. See the **Canvas Team Formation Guide** for a brief explanation. Contact the instructor or TAs if you need help finding teammates. **One member submits each group deliverable**; peer evaluation is completed individually.

3. Project Schedule

Team Registration / Proposal — Oct 15 (Thu 23:59): Complete team registration. Once your team is confirmed, any one member should submit the proposal, including the project title, a brief introduction, and all team members' names. Proposals will be reviewed during the following week, through Oct 22.

Poster Submission — Nov 27 (Fri 23:59): Submit **Poster.pdf** separately. Poster formatting requirements and sample posters will be released later.

Poster Session — Dec 04 (Fri 15:00–16:20): Present your project using your poster and answer questions.

Final Submission — Dec 11 (Fri 23:59): Submit **Group_XX_Project.zip** containing **Report.pdf, code, README, and data or download instructions**. Replace XX with your Canvas group identifier. If the full original data cannot be included, provide a download link; if neither is possible for special reasons, include sample data and explain why. The README should explain setup, data access and execution. **Poster.pdf is not required in the final ZIP.**

Team Member Peer Evaluation — Dec 18 (Fri 23:59): Each student confidentially evaluates their teammates' contributions.

Late submissions: Submissions up to one week late lose **20% of the earned mark**.

Do not submit directly AI-generated work or fabricated references. Include a separate report section disclosing external collaborators and how AIGC was used. Detailed grading rubrics will be released after the midterm exam.

Best regards,

TAs
