

Group Project Assessment Rubrics

Total: 100 points | 5 components | 11 criteria

Score each criterion with an integer in the matching band; add the scores within each component.

Peer assessment: average the totals received from all other group members (no self-rating).

Poster, presentation, report and code: the same scores for all group members.

Peer Assessment (20 Points)				
Criteria	Excellent (9–10)	Good (7–8)	Fair (4–6)	Poor (0–3)
Contribution (10)	Completes agreed work accurately and on time.	Completes most work; minor fixes or delays.	Partial work; repeated fixes or delays.	Little or no usable work.
Teamwork (10)	Communicates reliably and supports joint work.	Usually responsive; occasional coordination problems.	Often unresponsive or needs repeated reminders.	Rarely participates or obstructs teamwork.

Poster (20 Points)				
Criteria	Excellent (9–10)	Good (7–8)	Fair (4–6)	Poor (0–3)
Content (10)	Clearly presents problem, methods, results and conclusions.	All key elements; one is unclear.	Several key elements unclear or missing.	Project purpose and findings are unclear.
Visual Communication (10)	Readable layout; figures clearly show key findings.	Mostly readable; minor layout or figure issues.	Crowded layout or unclear figures hinder understanding.	Unreadable layout or misleading figures.

Presentation — Poster Q&A (30 Points)				
Criteria	Excellent (9–10)	Good (7–8)	Fair (4–6)	Poor (0–3)
Project Understanding (10)	Accurately explains data, workflow and method choices.	Mostly accurate; minor gaps in explanations.	Explains basics but misses key choices.	Cannot explain the core workflow.
Answers and Evidence (10)	Answers directly using relevant project evidence.	Mostly correct answers; some evidence missing.	Partly correct answers with little evidence.	Incorrect answers or cannot address questions.
Interpretation (10)	Explains findings, limitations and their implications.	Explains findings; limitations lack detail.	Repeats results with little interpretation.	Misinterprets results or cannot discuss limitations.

Assessment Notes

Presentation is assessed holistically using the criteria above. Individual contributions are reflected through peer assessment.

Provide the full dataset or download instructions. If special circumstances prevent you from providing the full original data, include sample data and explain the reason in the README. For a documented sample-data exception, assessment is based on the runnable sample workflow.

Submissions up to one week late incur a deduction of 20% of the earned mark (final mark = earned mark × 0.8).

Report (20 Points)				
Criteria	Excellent (9–10)	Good (7–8)	Fair (4–6)	Poor (0–3)
Problem and Methods (10)	Clearly documents task, data, preprocessing and methods.	Mostly complete; minor gaps in details.	Key steps are unclear or missing.	Task or methods are largely undocumented.
Experiments and Analysis (10)	Clear setup, fair comparisons and supported conclusions.	Adequate comparisons; minor setup or analysis gaps.	Weak comparisons or partly unsupported conclusions.	No meaningful evaluation or unsupported conclusions.

Code (10 Points)				
Criteria	Excellent (5)	Good (4)	Fair (2–3)	Poor (0–1)
Functionality (5)	Runs the complete workflow; reproduces reported results with full data, or documented sample results for an explained data exception.	Runs with minor fixes; results mostly match the documented full-data or sample run.	Only parts run, or results differ substantially from the documented run.	Cannot run or no usable implementation.
Readability and Setup (5)	Organized code; clear dependencies, data access and commands.	Understandable code; minor setup details missing.	Hard to follow; major setup details missing.	Disorganized code; no usable setup instructions.
